Dongguan BALUN Testing Technology Co., Ltd. TEST REPORT			
Applicant's name:	SolaX Power Network Technology (Zhejiang) Co., Ltd.		
Address:	No.288, Shizhu Road, Tonglu Economic Development Zone, Tonglu City, Zhejiang Province, 310000 P. R. CHINA		
Testing Laboratory:	Dongguan BALUN Testing Technology Co., Ltd.		
Testing Location:	Room 104, 204, 205, Building 1, No. 6, Industrial South Road, Songshan Lake District, Dongguan, Guangdong, China		
Name of samples:	Lithium ion Rechargeable Battery Module		
Model:	TP-HS25		
Trade Mark:	N/A		
Ratings:	51.2V, 50Ah, 2560Wh		
Apperance:	526×365×151.7mm , white cuboid. Weighs approx. 26.12kg.		
Battery type:	Lithium-ion Battery, 1P16S		
Manufacture's name::	SolaX Power Network Technology (Zhejiang) Co., Ltd.		
Manufacture's Address::	No.288, Shizhu Road, Tonglu Economic Development Zone, Tonglu City, Zhejiang Province, 310000 P. R. CHINA		
Name of Factory (ies)::	SolaX Power Network Technology (Zhejiang) Co., Ltd.		
Address of Factory (ies):	No.288, Shizhu Road, Tonglu Economic Development Zone, Tonglu City, Zhejiang Province, 310000 P. R. CHINA		
Conclusion:	The sample has passed the test items of UNITED NATIONS		
	"Recommendations of the TRANSPORT OF DANGEROUS GOODS"		
	Manual of Tests and Criteria ST/SG/AC.10/11/Rev.7 Section 38.3		
Remark:	/

	ST/SG/AC.10/11/Rev.6/Amend.1 Section 38.3			
Clause	Requirement Result	Verdict		
	requirement relating to voltage is not applicable to test			
	cells and batteries at fully discharged states.			
	T.3: Vibration	Р		
	Test procedure:			
	Cells and batteries are firmly secured to the platform of the vibration machine			
	without distorting the cells in such a manner as to faithfully transmit the vibration. The			
	vibration shall be a sinusoidal waveform with a logarithmic sweep between 7 Hz and			
	200 Hz and back to 7 Hz traversed in 15 minutes. This cycle shall be repeated 12			
	times for a total of 3 hours for each of three mutually perpendicular mounting positions			
	of the cell. One of the directions of vibration must be perpendicular to the terminal			
	face.			
	The logarithmic frequency sweep shall differ for cells and batteries with a gross			
	mass of not more than 12 kg (cells and small batteries), and for batteries with a gross			
	mass of more than 12 kg (large batteries).			
	For cells and small batteries: from 7 Hz a peak acceleration of 1 gn is maintained			
	until 18 Hz is reached. The amplitude is then maintained at 0.8 mm (1.6 mm total			
	excursion) and the frequency increased until a peak acceleration of 8 gn occurs			
8.3.4.3	(approximately 50 Hz). A peak acceleration of 8 gn is then maintained until the			
	frequency is increased to 200 Hz.			
	For large batteries: from 7 Hz to a peak acceleration of $1g_n$ is maintained unti18 Hz			
	is reached. The amplitude is then maintained at 0.8 mm (1.6 mm total excursion) and			
	the frequency increased until a peak acceleration of 2gn occurs (approximately 25			
	Hz). A peak acceleration of $2g_n$ is then maintained until the frequency is increased to			
	200 Hz.			
	Requirement:			
	Cells and batteries meet this requirement if there is			
	no leakage, no venting, no disassembly, no rupture			
	and no fire during the test and after the test and if the			
	open circuit voltage of each test cell or battery directly The test results meet the	Р		
	after testing in its third perpendicular mounting position requirements. See table 1.	·		
	is not less than 90% of its voltage immediately prior to			
	this procedure. The requirement relating to voltage is			
	not applicable to test cells and batteries at fully			
	discharged states.

	ST/SG/AC.10/11/Rev.6/Amend.1 Se	1 1					
Clause	Requirement	Result	Verdict				
	The cell or battery to be tested shall be shall be	heated for a period of time					
	necessary to reach a homogeneous stabilized tempera	ature of 57 ± 4 °C, measured					
	on the external case. This period of time depends on the size and design of the cell						
	or battery and should be assessed and documented	d. If this assessment is not					
	feasible, the exposure time shall be at least 6 hours for s	mall cells and small batteries,					
	and 12 hours for large cells and large batteries. Then the	ne cell or battery at 57 ± 4 °C					
	shall be subjected to one short circuit condition with a total external resistance of lessthan 0.1 ohm.This short circuit condition is continued for at least one hour after the cell or battery						
	external case temperature has returned to 57 ± 4 °C	, or in the case of the large					
	batteries, has decreased by half of the maximum ter	nperature increase observed					
	during the test and remains below that value.						
	The short circuit and cooling down phases shall be o	conducted at least at ambient					
	temperature.						
	Requirement:						
	Cells and batteries meet this requirement if their	The first second second disc					
	external temperature does not exceed 170 °C and	The test results meet the	Р				
	there is no disassembly, no rupture and no fire within	requirements. See table 1.					
	six hours after this test.						
	T.6: Impact / Crush:		Ρ				
	Test procedure:						
	Impact (applicable to cylindrical cells not less than 1	8.0 mm in diameter)					
	NOTE: Diameter here refers to the design parameter (for example the diameter of						
	18650 cells is 18.0 mm).						
	The sample cell or component cell is to be placed on	a flat smooth surface. A 15.8					
	mm ± 0.1mm diameter, at least 6 cm long, or the lo	ngest dimension of the cell,					
8.3.4.6	whichever is greater, Type 316 stainless steel bar is to b	be placed across the centre of					
	the sample. A 9.1 kg \pm 0.1 kg mass is to be dropped from	om a height of 61 ± 2.5 cm at					
	the intersection of the bar and sample in a controlled manner using a near frictionless,						
	vertical sliding track or channel with minimal drag on the falling mass. The vertical						
	track or channel used to guide the falling mass shall be oriented 90 degrees from the						
	horizontal supporting surface.						
	The test sample is to be impacted with its longitudinal	axis parallel to the flat surface					
	and perpendicular to the longitudinal axis of the 15.8 mm \pm 0.1mm diameter curved						
	surface lying across the center of the test sample. Each	n sample is to be subjected to					

	ST/SG/AC.10/11/Rev.6/Amend.1 Section 38.3					
Clause	Requirement	Result	Verdict			
	only a single impact.					
	Test procedure:					
	Crush (applicable to prismatic, pouch, coin/button cells and cylindrical cells less					
	than 18.0 mm in diameter)					
	NOTE: Diameter here refers to the design parameter (for example the diameter of					
	18650 cells is 18.0 mm).					
	A cell or component cell is to be crushed between two	•				
	is to be gradual with a speed of approximately 1.5 cm/s					
	The crushing is to be continued until the first of the three	e options below is reached.				
	(a) The applied force reaches 13 kN \pm 0.78 kN;					
	Example: The force shall be applied by a hy					
	diameter piston until a pressure of 17 MPa is re	-				
	(b) The voltage of the cell drops by at least 100 mV; or(c) The cell is deformed by 50% or more of its original to					
	Once the maximum pressure has been obtained, the voltage drops by 100 mV or more, or the cell is deformed by at least 50% of its original thickness, the pressure					
	shall be released.					
	A prismatic or pouch cell shall be crushed by applying the force to the widest side.					
	A button/coin cell shall be crushed by applying the fo	rce on its flat surfaces. For				
	cylindrical cells, the crush force shall be applied perpendicular to the longitudinal axis.					
	Each test cell or component cell is to be subjected	to one crush only. The test				
	sample shall be observed for a further 6 h. The test sh	nall be conducted using test				
	cells or component cells that have not previously been s	subjected to other tests.				
	Requirement:	The test results meet the
