Form C: Type Test Verification Report

All Micro-generators connected to the **DNO Distribution Network** shall be **Fully Type Tested**. This form is the **Manufacturer**'s declaration of compliance with the requirements of EREC G98.

This form should be used when making a Type Test submission to the Energy Networks Association (ENA) Type Test Register.

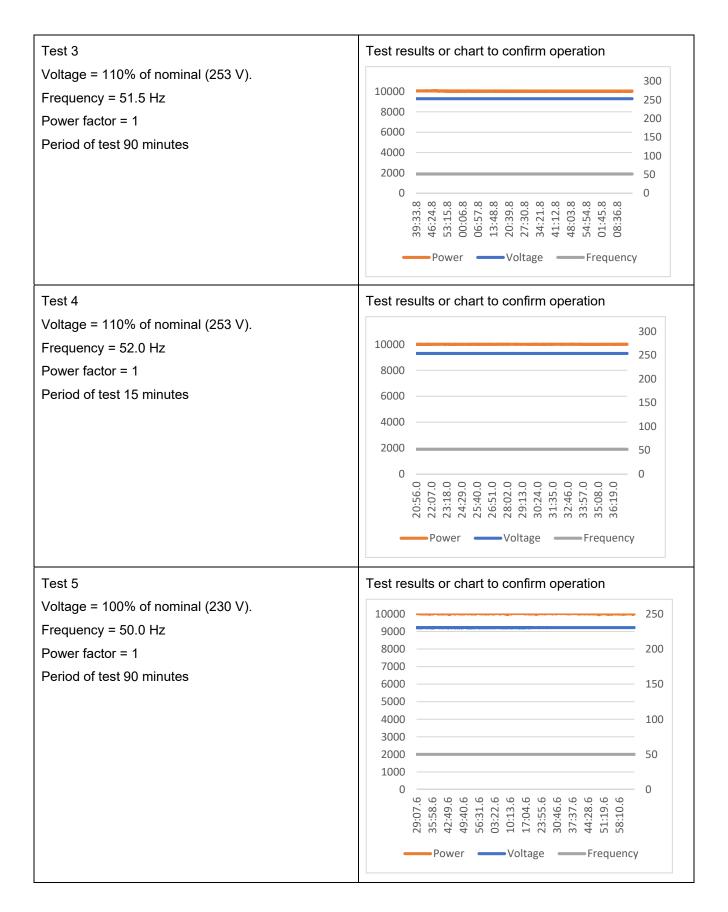

If the **Micro-generator** is **Fully Type Tested** and already registered with the ENA Type Test Register, the **Installation Document** should include the **Manufacturer**'s Reference Number (the system reference), and this form does not need to be submitted.

ENA Engineering Recommendation G98 Issue 1 Amendment 6 2021

Power Quality – Harmonics: These tests should be carried out as specified in BS EN 61000-3-2. The chosen test should be undertaken with a fixed source of energy at two power levels a) between 45 and 55% and b) at 100% of **Registered Capacity**. The test requirements are specified in Annex A1 A.1.3.1 (**Inverter** connected) or Annex A2 A.2.3.1 (Synchronous).

¹ See the note in A.2.3.1 if 45-55% of **Registered Capacity** is below the minimum stable operating level. If an alternative loading level is chosen, the level should be indicated on the test form and the reason for not testing at 45-55% of **Registered Capacity** should be stated. The additional comments box at the end of the harmonics test sheet can be used for this.

Note the higher limits for odd harmonics 21 and above are only allowable under certain conditions, if these higher limits are utilised please state the exemption used as detailed in part 6.2.3.4 of BS EN 61000-3-2 in the box below.

Additional comments:

Power Quality – Voltage fluctuations and Flicker: These tests should be undertaken in accordance with EREC G98 Annex A1 A.1.3.3 (**Inverter** connected) or Annex A2 A.2.3.3 (Synchronous).

The standard test impedance is 0.4 Ω for a single phase **Micro-generating Plant** (and for a two phase unit in a three phase system) and 0.24 Ω for a three phase **Micro-generating Plant** (and for a two phase unit in a split phase system). Please ensure that both test and standard impedance are completed on this form. If the test impedance (or the measured impedance) is different to the standard impedance, it must be normalised to the standard impedance as follows (where the **Power Factor** of the generation output is 0.98 or above):

d max normalised value = (Standard impedance / Measured impedance) x Measured value.

Where the **Power Factor** of the output is under 0.98 then the X to R ratio of the test impedance should be close to that of the standard impedance.

The stopping test should be a trip from full load operation.

The duration of these tests needs to comply with the particular requirements set out in the testing notes for the technology under test.

The test date and location must be declared.

Test start date	20.5.202	2		Test end date 20.5.2022					
Test location		No. 288 Shizhu Road, Tonglu Economic Development Zone, To 310000, P.R. China						glu City, Z	hejiang Province
	Starting			Stopping				Running	
	d(max)	d(c)	d(t)	d(max)	d(c)		d(t)	Pst	P _{lt} 2 hours
Measured Values at test impedance	0.7811	0.1787	0	0.8242	0.1380)	0	0.249	0.170
Normalised to standard impedance	NA	NA	NA	NA	NA		NA	NA	NA
Normalised to required maximum impedance	NA	NA	NA	NA	NA		NA	NA	NA
Limits set under BS EN 61000-3-11	4%	3.3%	3.3%	4%	3.3%		3.3%	1.0	0.65
Test Impedance	R			Ω	,	K			Ω

Standard Impedance	R	0.24 * 0.4 ^	Ω	х	0.15 * 0.25 ^	Ω
Maximum Impedance	R		Ω	х		Ω

*Applies to three phase and split single phase **Micro-generators**. Delete as appropriate.

^ Applies to single phase **Micro-generators** and **Micro-generators** using two phases on a three phase system. Delete as appropriate.

Power quality – DC injection: This test should be carried out in accordance with A 1.3.4 as applicable.

The % **DC** injection ("as % of rated AC current" below) is calculated as follows:

% DC injection = Recorded DC value in Amps / base current

where the base current is the **Registered Capacity** (W) / 230 V. The % **DC** injection should not be greater than 0.25%.

Test power level	20%	50%	75%	100%
Recorded DC value in Amps	0.0265/0.0214/0.021 6	0.0065/0.0085/0.007 2	0.0065/0.0146/0.0119	0.0092/0.0133/0.0152
as % of rated AC current	0.18%/0.15%/0.15%	0.04%/0.06%/0.05%	0.04%/0.10%/0.08%	0.06%/0.09%/0.10%
Limit	0.25%	0.25%	0.25%	0.25%

Power Quality – Power factor: This test shall be carried out in accordance with A.1.3.2 and A.2.3.2 at three voltage levels and at **Registered Capacity** and the measured **Power Factor** must be greater than 0.95 to pass. Voltage to be maintained within ±1.5% of the stated level during the test.

	216.2 V	230 V	253 V
Measured value	0.9999	0.9998	0.9999
Power Factor Limit	>0.95	>0.95	>0.95

Protection – Frequency tests: These tests should be carried out in accordance with Annex A1 A.1.2.3 (**Inverter** connected) or Annex A2 A.2.2.3 (Synchronous). For trip tests, frequency and time delay should be stated. For "no trip tests", "no trip" can be stated.

Function	Setting		Trip test		"No trip tests"		
	Frequency	Time delay	Frequency	Time delay	Frequency /time	Confirm no trip	
U/F stage 1	47.5 Hz	20 s	47.49Hz	20.1s	47.7 Hz 30 s	No trip	
U/F stage 2	47 Hz	0.5 s	47.01Hz	0.598s	47.2 Hz 19.5 s	No trip	

					46.8 Hz 0.45 s	No trip
O/F stage 1	52 Hz	0.5 s	52.01 Hz	0.51s	51.8 Hz 120.0 s	No trip
					52.2 Hz 0.45 s	No trip

Note. For frequency trip tests the frequency required to trip is the setting ± 0.1 Hz. In order to measure the time delay a larger deviation than the minimum required to operate the projection can be used. The "No trip tests" need to be carried out at the setting ± 0.2 Hz and for the relevant times as shown in the table above to ensure that the protection will not trip in error.

Protection – Voltage tests: These tests should be carried out in accordance with Annex A1 A.1.2.2 (**Inverter** connected) or Annex A2 A.2.2.2 (Synchronous). For trip tests, voltage and time delay should be stated. For "no trip tests", "no trip" can be stated.

Function	Setting		Trip test		"No trip tests"		
	Voltage	Time delay	Voltage	Time delay	Voltage /time	Confirm no trip	
U/V	184 V	2.5 s	183.6V	2.52 s	188 V 5.0 s	No trip	
					180 V 2.45 s	No trip	
O/V stage 1	262.2 V	1.0 s	261.9V	1.01 s	258.2 V 5.0 s	No trip	
O/V stage 2	273.7 V	0.5 s	273.5V	0.572s	269.7 V 0.95 s	No trip	
					277.7 V 0.45 s	No trip	

Note for Voltage tests the Voltage required to trip is the setting ± 3.45 V. The time delay can be measured at a larger deviation than the minimum required to operate the protection. The No trip tests need to be carried out at the setting ± 4 V and for the relevant times as shown in the table above to ensure that the protection will not trip in error.

Protection – Loss of Mains test: For PV **Inverters** shall be tested in accordance with BS EN 62116. Other **Micro-generators** should be tested in accordance with A.2.2.4 at 10%, 55% and 100% of rated power.

For **Inverter**s tested to BS EN 62116 the following sub set of tests should be recorded in the following table.

Test Power and	33%	66%	100%	33%	66%	100%
imbalance	-5% Q	-5% Q	-5% P	+5% Q	+5% Q	+5% P
	Test 22	Test 12	Test 5	Test 31	Test 21	Test 10
Trip time. Limit is 0.5 s ²	0.376 s	0.448 s	0.118 s	0.391 s	0.410 s	0.440 s

² If the device requires additional shut down time (beyond 0.5 s but less than 1 s) then this should be stated on this form.

Protection – Frequency change, Vector Shift Stability test: This test should be carried out in accordance with EREC G98 Annex A1 A.1.2.6 (**Inverter** connected) or Annex A2 A.2.2.6 (Synchronous). Confirmation is required that the **Micro-generating Plant** does not trip under positive / negative vector shift.

	Start Frequency	Change	Confirm no trip	
Positive Vector Shift	49.0 Hz	+50 degrees	No trip	
Negative Vector Shift	50.0 Hz	- 50 degrees	No trip	

Protection – Frequency change, RoCoF Stability test: The requirement is specified in section 11.3, test procedure in Annex A.1.2.6 (**Inverter** connected) or Annex A2 A.2.2.6 (Synchronous). Confirmation is required that the **Micro-generating Plant** does not trip for the duration of the ramp up and ramp down test.

Ramp range	amp range Test frequency ramp: Test Duration		Confirm no trip	
49.0 Hz to 51.0 Hz	+0.95 Hzs ⁻¹	2.1 s	No trip	
51.0 Hz to 49.0 Hz	-0.95 Hzs ⁻¹	2.1 s	No trip	

Limited Frequency Sensitive Mode – Overfrequency test: This test should be carried out in accordance with A.1.2.8. The test should be carried out using the specific threshold frequency of 50.4 Hz and **Droop** of 10%. The measurement tolerances are contained in A.1.2.8.

Test sequence at Registered Capacity >80%	Measured Active Power Output	Frequency	Primary Power Source	Active Power Gradient
Step a) 50.00 Hz ±0.01 Hz	10000.6W	50.00Hz		-
Step b) 50.45 Hz ±0.05 Hz	9979.3W	50.45 Hz		-
Step c) 50.70 Hz ±0.10 Hz	9544.5W	50.70 Hz		-
Step d) 51.15 Hz ±0.05 Hz	8546.3W	51.15 Hz		-
Step e) 50.70 Hz ±0.10 Hz	9544.0W	50.70 Hz		-
Step f) 50.45 Hz ±0.05 Hz	9980.6W	50.45 Hz		-
Step g) 50.00 Hz ±0.01 Hz	10032.3W	50.00 Hz		
Test sequence at Registered Capacity 40% - 60%	Measured Active Power Output	Frequency	Primary Power Source	Active Power Gradient
Step a) 50.00 Hz ±0.01 Hz	4972.5 W	50.00 Hz		-

Step b) 50.45 Hz ±0.05 Hz	4912.7 W	50.45 Hz	-
Step c) 50.70 Hz ±0.10 Hz	4357.3 W	50.70 Hz	-
Step d) 51.15 Hz ±0.05 Hz	3363.9 W	51.15 Hz	-
Step e) 50.70 Hz ±0.10 Hz	4362.9 W	50.70 Hz	-
Step f) 50.45 Hz ±0.05 Hz	4362.9 W	50.45 Hz	-
Step g) 50.00 Hz ±0.01 Hz	4974.2 W	50.00 Hz	

Power output with falling frequency test: This test should be carried out in accordance with A.1.2.7.

Test sequence	Measured Active Power Output	Frequency	Primary power source
Test a) 50 Hz ± 0.01 Hz	10030W	50.00Hz	
Test b) Point between 49.5 Hz and 49.6 Hz	10031W	49.55Hz	
Test c) Point between 47.5 Hz and 47.6 Hz	10029W	47.55Hz	

NOTE: The operating point in Test (b) and (c) shall be maintained for at least 5 minutes

Re-connection timer.

Test should prove that the reconnection sequence starts after a minimum delay of 20 s for restoration of voltage and frequency to within the stage 1 settings of Table 2. Both the time delay setting and the measured delay should be provided in this form; both should be greater than 20 s to pass. Confirmation should be provided that the **Micro-generating Plant** does not reconnect at the voltage and frequency settings below; a statement of "no reconnection" can be made.

Time delay setting	Measured delay	Checks on no reconnection when voltage or frequency is brought to just outside stage 1 limits of table 2.				
60s	61s	At 266.2 V	At 180.0 V	/	At 47.4 Hz	At 52.1 Hz
Confirmation that the Micro-generator does not re-connect.		No-Reconnection	No-Reconnection		No-Reconnection	No-Reconnection
Fault level contribution : These tests shall be carried out in accordance with EREC G98 Annex A1 A.1.3.5 (Inverter connected) and Annex A2 A.2.3.4 (Synchronous). Please complete each entry, even if the fault contribution is zero.						
For machines with electro-magnetic output				For Inverter output		

Parameter	Symbol	Value	Time after fault	Volts	Amps			
Peak Short Circuit current	İp		20 ms	31.6V	3.65A			
Initial Value of aperiodic current	А		100 ms	25.0V	0.11A			
Initial symmetrical short-circuit current*	l _k		250 ms					
Decaying (aperiodic) component of short circuit current*	İDC		500 ms					
Reactance/Resistance Ratio of source*	×/ _R		Time to trip	0.39s	In seconds			
	For rotating machines and linear piston machines the test should produce a 0 s – 2 s plot of the short circuit current as seen at the Micro-generator terminals.							
* Values for these parameters should be provided where the short circuit duration is sufficiently long to enable interpolation of the plot								
Logic Interface (input port)								
Confirm that an input port is prov to zero	Yes							
Provide high level description of lo (the additional comments box bel	Yes							
Self-Monitoring solid state swi G98 Annex A1 A.1.3.6 (Inverter	NA							
It has been verified that in the event of the solid state switching device failing to disconnect the Micro-generator , the voltage on the output side of the switching device is reduced to a value below 50 V within 0.5 s.								
Cyber security								
Confirm that the Manufacturer statement describing how the M security requirements, as detailed								
Additional comments
